

# WEEK06 – HTML MARKUP LANGUAGE

---

WEN-BIN JIAN

DEPARTMENT OF ELECTROPHYSICS, NATIONAL CHIAO TUNG UNIVERSITY

# OUTLINE

---

1. **Introduction to HTML & HTML5**
2. **HTML Head**
3. **HTML Layout**
4. **Attributes of Tags**
5. HTML Heading & Paragraph
6. HTML Word Formatting
7. HTML Hyper Link
8. HTML Quotations & Images

# INTRODUCTION TO HTML

HTML – Hypertext Markup Language, developed since 1990s; 1980, Tim Berners-Lee, an Englishman. At CERN, he wrote a program, Enquire, for a "memory substitute".

hypertext – an arrangement of the information in a computer database that allows a user to get information and to go from one document to another by clicking on highlighted words or pictures

1991 – Tim Berners-Lee invented HTML.

1995 – HTML Working Group defined HTML 2.0. JavaScript language emerged.

1998 – In early time, there was a browser war between Microsoft Internet Explorer and Netscape Navigator. It ended up with one pledged for antitrust violations and the other vanished.

1999 – W3C recommended HTML 4.01.

2000 – W3C recommended XHTML 1.0.

2014 – W3C recommended HTML 5.

2016 – W3C recommended HTML 5.1 & HTML 5.2 in 2017.

# INTRODUCTION TO HTML

---

HTML is an **interpreted language** which can be executed by web **browsers**.

There are several browsers currently that can process the HTML language, including Internet Explorer, Google Chrome, Safari (iOS), Firefox (Mozilla), Opera (Opera, Norway).

HTML is not only a language of hypertext. It is an object-oriented programming language while it needs assistance from CSS, JavaScript and DOM (Document Object Model).

1995 – JavaScript was developed by Netscape. It is currently used for cross-platform programming. (Scheme, Lisp)

The HTML5 is an object-oriented language while the object-oriented features need to be manipulated using the JavaScript.

# INTRODUCTION TO HTML

- Markup language – tag to indicate the organization & content in the document
- Declare the type of the document - `<!DOCTYPE>`
- Start/end of the document - `<html>`
- Start/end of the head, show the title bar in the browser - `<head>`
- Start/end of the main text (body) - `<body>`

IC\_W601.html

```
<!DOCTYPE html>
<html>
  <head>
    <title>Title of This Document File</title>
  </head>
  <body>
    <p>
      This is the content of the document file. It is similar to a word
      file with organized structure. Here a new paragraph is introduced
      by the tag - p.
    </p>
    <p>
      The p-tag is used to separate lines of words into two
      paragraphs. The context can be easily distributed by using a server
      and all kinds of browsers can read and show the document. Thus, it
      is very powerful to set up this kind of document for your concept
      broadcasting.
    </p>
    <p>
      Let's start to distribute our ideas worldwide.
    </p>
  </body>
</html>
```

# INTRODUCTION TO HTML5

- Simplify the document type & charset declaration
    - `<!DOCTYPE html>`, `<meta charset="UTF-8">`
  - New elements: semantic elements: `<header>`, `<footer>`, `<article>`, `<section>`, `<aside>`, `<nav>`, `<hgroup>`; graphic elements: `<svg>`, `<canvas>`; multimedia elements: `<audio>`, `<video>`
  - New API's (**Application Programming Interfaces**): HTML geolocation, drag and drop, local storage, application cache, web workers, server-sent events
  - Removed elements: `<acronym>`, `<applet>`, `<basefont>`, `<big>`, `<center>`, `<dir>`, `<font>`, `<frame>`, `<frameset>`, `<noframes>`, `<strike>`, `<tt>`
- html { element  
style – attribute  
commands and code

# WHAT'S IN THE HTML HEAD?

- Head – document head (abstractive), not content head
- In the content between the opening tag, <element\_name>, and the closing tag </element\_name>
- <title> </title> - enclose the words shown on the title bar of the browser window
- <style> </style> - define the global styles of the document
- <link> - link to external style file, filename.css
- <meta> - specify the character set, a description of the page, keywords, author, refresh time, viewport
- <script> - globally used JavaScript codes
- <base> - define the base URL for all relative URLs used in this page, use it as #

html

**head**

body – show up  
area

# THE HTML LAYOUTS

- Concept of container – object-oriented style
- `<div> </div>` grouping
- `<header> </header>` - a header or title of the document
- `<section> </section>` - a section
- `<article> </article>` - independent self-contained article
- `<footer> </footer>` - a footer in the document
- `<details> </details>` - defines additional details such as authors' contact information
  - `<summary> </summary>` - the heading in the detail section
- The layout can be implemented using CSS floats & CSS3 flexbox.

html

head

**body** – show up  
`<header>..`  
`<nav>..`  
`<section>`

html

header

nav

section

aside

article

footer

# THE ATTRIBUTES OF THE HTML TAGS

- Each tag has several attributes that can be indicated.
  - The attribute of **href** – a link address
  - The attribute of **src** – the file name of the image source
  - The attribute of **width, height** – the width and the height of the image
  - The attribute of **alt** – an alternative text
  - The attribute of **style (developed to Cascading Style Sheets, css)** – used to specify the style of an element (tag), inside it there are many style parameters including color, font, size, ...
  - The attribute of **title** – displayed as tooltip
  - The attribute of **type, lang, dir, accesskey, tabindex, spellcheck, hidden, contenteditable, cite ... (id, class)**
  - The format to denote the attribute – use double (single) quotes to assign values, e.g. <footer title="The Author's Copyright Declaration">
- html {  
  element {  
    void, empty elements, like < br >  
    non – void elements, like < p >, </p >  
    style – attribute  
    commands and code

# THE APPEARANCE OF THE HTML DOCUMENT

IC\_W602.html

內能與等體積比熱

file:///C:/Users/wbjia/Documents/Lecture%20Notes/2018%20(9-12)%20Introduction%20to%20Comp

## 內能與等體積比熱

熱力學的內能是氣體分子所有可能的動能加總，包括移動、轉動與振動動能。

有同學來信問到為何內能的變化量是系統氣體分子的莫耳數乘上等體積莫爾比熱，再乘上溫度變化量？

先談一下熱能有兩種形式表現，一種是運動的幅度，像是振動幅度或是移動速度等，另一種則是熵值即狀態數的增加，運動幅度增加的熱能會改變溫度，熵值增加則可以在溫度不變時增加熱能，熱機是利用熵值增加與減少來吸熱放熱並對外作功。

等體積莫耳比熱是指在等體積條件下，每單位溫度每莫耳氣體分子的熱容量，等體積條件下氣體與外界沒有作功的交換，外界提供系統的熱能完全轉換成內能而提高系統溫度。另一種比熱是等壓力比熱，此時系統與外界保持固定壓力但可以有作功的能量交換，當外界提供給系統熱能時，系統的內能增加且溫度上升，同時系統會對外作功，因此等壓力變溫能造成更多的熱能變化。

汽油引擎與柴油引擎的運作中有一段熱力學過程不同，在那段熱力學過程中汽油引擎是等體積吸熱能，而柴油引擎是等壓力吸熱能。柴油引擎比汽油引擎扭力大，且柴油引擎能源轉換效能較高較省油(但排放廢氣汙染程度較嚴重)。

內能-internal energy

比熱-specific heat

The author, Wen-Bin Jian, received his bachelor degree in Physics from National Taiwan University. He has teaching experiences in physics for more than ten fifteen years. This document is maintained by Mr. Wen-Bin Jian. For all details of the content, you could contact Mr. Jian directly.

# OUTLINE

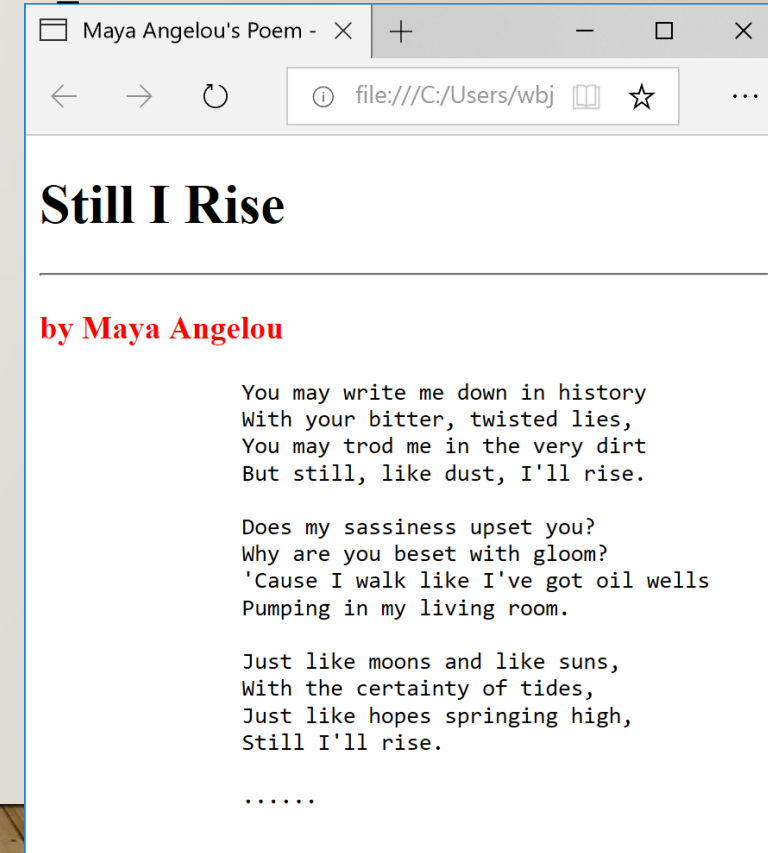

---

1. Introduction to HTML & HTML5
2. HTML Head
3. HTML Layout
4. Attributes of Tags
- 5. HTML Heading & Paragraph**
- 6. HTML Word Formatting**
- 7. HTML Hyper Link**
- 8. HTML Quotations & Images**

# HTML HEADINGS & PARAGRAPHS

- Document headings: `<h1> </h1>`, `<h2> </h2>`, ... `<h6> </h6>`
- `<hr>` - draw a horizontal line to separate the content
- Empty elements do not have closing tags. One example is `<hr>`.
- Document paragraphs: `<p> </p>`
- `<br>` - force a line break
- `<pre> </pre>` - preformatted text

IC\_WV603.html

# HTML FORMATTING OF WORDS

- <b> - bold text, <strong> - important text
- <i> - Italic text, <em> - emphasized text
- <mark> - marked text
- <small> - small text
- <u> - underlined text
- <abbr title="non-abbreviated"> - abbreviation
- <del> - deleted text
- <ins> - inserted text
- <s> - to strike through text
- <sub> - subscript text
- <sup> - superscript text

IC\_W604.html

The screenshot shows a web browser window with the title 'IC\_W604.html'. The address bar shows the file path: 'file:///C:/Users/wbjia/Documents/Lecture%20Notes/2018%'. The document content is titled 'Formatting of Text' and includes several examples of HTML formatting:

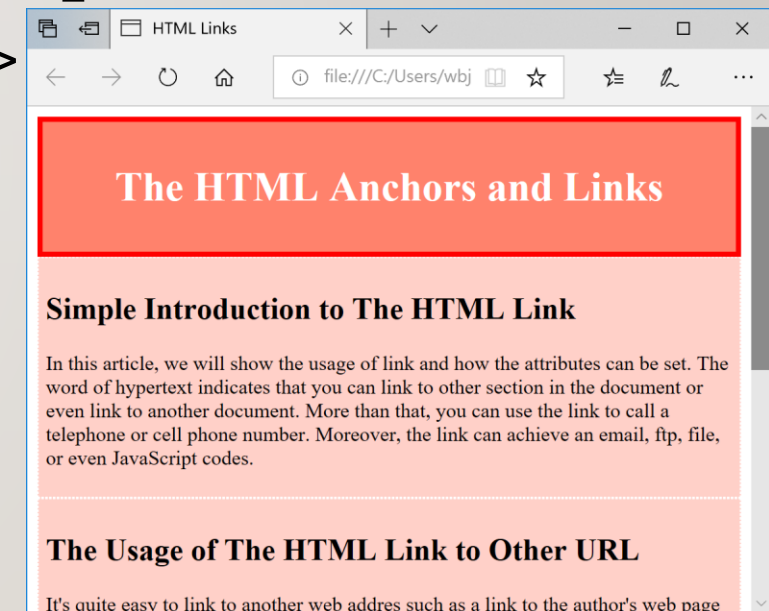

- A red text: **by Wen-Bin Jian**
- A paragraph explaining the difference between bold and important text, and italic and emphasized text.
- A paragraph introducing a mathematical expression:  $x^2+y^2=1$ .
- A paragraph explaining how the expression represents a circle in a two-dimensional space.
- A paragraph showing various text formatting tags: <mark> (highlighted text), <small> (small text), <del> (deleted text), <ins> (inserted text), and <s> (struck through text).
- A paragraph explaining the use of the underline tag (<u>) and the abbreviation tag (<abbr>).

# HTML ANCHORS & HYPERLINKS

- `<a href="a link">description</a>`
- Attributes: href: destination address; target: `_blank`, `_self`, `_parent`, `_top`; title: information about the link; download: to download a file
- `<a href="http://nqpl.ep.nctu.edu.tw/" rel="external">Another Site</a>`
- `<a href="ftp://ca.nctu.edu.tw">link to NCTU ftp server</a>`
- `<h1 id="chap1"></h1>`, `<a href="#chap1">Goto Chapter 1</a>`
- `<a href="tel:+88635712121">Call NCTU</a>`
- `<a href="mailto:wbjian@gmail.com?subject=Ask&body=You got a mail.">Contact Me</a>`
- `<a href="dest addr" title="link expression"></a>`

IC\_W605.html

# HTML COMMENTS & QUOTATIONS

- `<!-- write comments about your codes here -->`
- In line quotation: `<q cite="link addr"> </q>`
- Block quotation: `<blockquote cite="link addr"> </blockquote>`
- Contact information of authors: `<address>`
- Defining the text direction: `<bdo dir="rtl"></bdo>`
- The reference of the quoted source: `<cite><a href="the ref addr">title</a></cite>`

IC\_W606.html

Using The Image in The

file:///C:/Users/wbjia/Documents/Lecture%20Notes/20

### Showing Images in The HTML Document

It's quite simple to show images in the text. You can use the tag of `<img>` to show images in your content. For a journal paper style, we always put figure caption to express the content of the figures. Sometimes, there are several figures put together and they are marked by a), b), c), etc. The image tage can be included in the link tag with an additional tag of text like paragraph or division so it is possible to attach the text of figure caption with the figure. On the other hand, you can also use the two new tags - figure and figcaption - to put figures with captions whereas you may find some problems when you turn the float style of the figure on. There are some difficulties to integrate text and figures together. You may try it yourself.

Figure 1. This is the logo of National Chiao Tung University.

Here we show the usage of a map on an image. You need to define a map and use it for linkage when the users click their mouse pointer on the image.

### Reference

1. [https://www.goodreads.com/author/quotes/289513.Benjamin\\_Franklin](https://www.goodreads.com/author/quotes/289513.Benjamin_Franklin).

This document was prepared by Mr. Wen-Bin Jian.

# HTML IMAGES

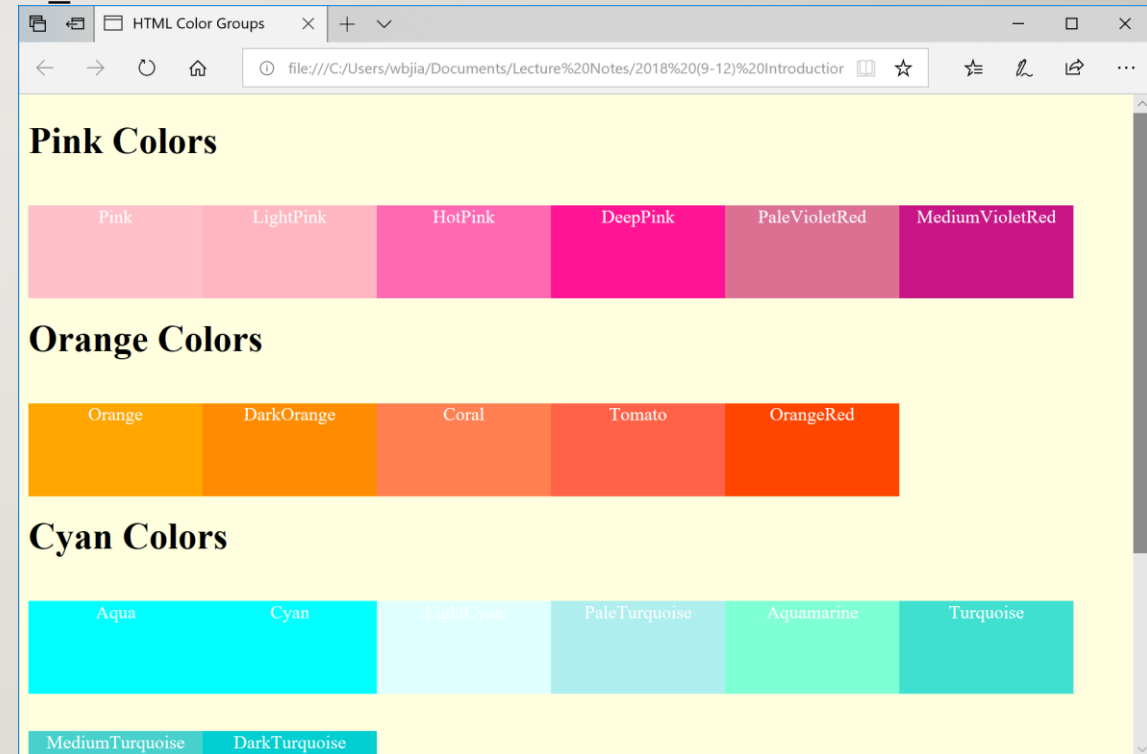

- ``
- `` = ``
- To float your image: ``, float to right
- Image map: clickable areas on the image
  - ``
  - `<map name="mymap"> <area shape="rect" coords="xl, yt, xr, yb" alt="expr" href="link addr">... </map>`
- Responsive appearance:
  - `<picture>`
  - `<source media="(min-width: 600px)" srcset="fileA"><source media="(min-width: 400px)" srcset="fileB"> `
  - `</picture>`
- Background image: `<p style="background-image: url('name.jpg');"> ... </p>`

semantic:  
`<figure>`  
    `<img src="">`  
    `<figcaption></figcaption>`  
`</figure>`

# HTML COLORS

- `<p style="color:White; background-color:DodgeBlue; border: 2px solid Black;"></p>`
  - 140 colors: Pink, LightPink, HotPink, DeepPink, PaleVioletRed, MediumVioletRed ...
- `color: rgb(255, 128, 128) – rgb(R, G, B)`
- `color: #ff8080 - #rrggbb`
- `color: rgba(255, 128, 128, 0.5)`

## IC\_W607.html

# EXERCISE

---

1. Please use all kinds of html tags to prepare a CV (curriculum vitae) for yourself.
2. Use the HTML table to prepare your weekly schedule of courses.
3. Use the HTML to design a list to show contact information of your friends. Make sure that you can use your cell phone to reach your friends by using links in your HTML file.
4. Use the HTML to design a Taiwan map on which you can click the city (or county) area and link to the city's government homepage.
5. Use the HTML to give a photo of a car with descriptions of its components. When you click on one component on the car, it will link to a description of that component.
